

# Drinking Water

## OUR MOST CRITICAL ASSET FOR HEALTHY LIFESTYLES

---

Of all the services provided by communities, drinking water is arguably the most critical. We rely on it to fight fires. We consume it and therefore remain committed to its quality and health effects. Public confidence in, and reliability of, our drinking water systems are primary goals of public and private water suppliers across the US. Hoyle Tanner places the highest priority on helping our clients meet those goals.

projects

## Engineering Services:

**Planning:** Capital planning, funding applications, system planning, feasibility studies, modeling, testing, mapping & asset management & new source development

**Drinking Water:** Distribution, storage, treatment, capacity & booster stations

**Project Coordination:** Permitting, public outreach, design, bidding & construction-phase services

## How we help:

Communities need a team that can be collaborative and guide the work for their benefit. Our projects begin with defining the challenges and the goals before the solutions. Hoyle Tanner is trusted partner that is committed to delivering a successful strategy that is functional, cost-effective, and sustainable for years to come.
