

Environmental Permitting

STEWARDSHIP OF THE NATURAL ECOSYSTEM

Obtaining an environmental permit is often a critical element for the success of a project. Each project requires specific permitting to address a multitude of environmental, social and historic factors. Our experienced team of experts collaborates throughout all phases of a project to balance the regulatory requirements and protection of natural resources while meeting schedules and budgets.

900 species
threatened or endangered
in new england

Environmental Permitting:

NEPA: EIS, Eas and Ces for FAA, FHWA, US Army Corps of Engineers, US Fish & Wildlife Service, FEMA, EPA, including Section 106 NHPA analysis & documentation, public/community outreach

Permitting: Federal, state & local resource permitting (natural & cultural)

Ecosystem: Site selection & evaluation, natural & cultural resource surveys, wildlife studies & evaluations

Aquatic Resources: Wetland delineation & mitigation monitoring & design, RTE surveys

How we help:

Our professionals combine a comprehensive understanding of ecological systems, natural and cultural history, and habitat requirements with an in-depth knowledge of resource agency requirements. This foundation of knowledge allows our team to be excellent stewards of the natural environment while progressing projects.
