## AGING INFRASTRUCTURE & NEW DISCHARGE PERMITS

---

With a focus on aging wastewater infrastructure, communities need to proactively address system needs to best meet their obligation to deliver cost-effective, reliable, sustainable wastewater collection, conveyance, and treatment. Our wastewater engineers partner with communities to navigate the regulatory, funding and technical challenges of meeting stricter permit limits. This measured approach delivers solutions to communities well into the future.

## Inspection Services:

**Planning:** Asset management programs, preliminary engineering studies, basis of design reports, project cost estimates, funding application assistance

**Design:** Individual components or complete systems - collection, conveyance, treatment, SSO & CSO

**Bidding:** Bid documents, advertisements, pre-bid meetings, addenda, bid opening, recommendation & award

**Construction:** Administration, resident observation, progress meetings, payment documentation, funding agency compliance, commissioning, record drawings

## How we help:

Hoyle Tanner's wastewater engineers help you define your needs and guide you to the best project-specific solution while optimizing funding agency commitments for your projects.
